CCG:

Even if still not fully representative, for the first time, the number of respondents – 64, divided across 10th sem. (27) and 8th sem. (37) – is approaching a rate that makes it possible to generalise across the CCG student population on the basis of the semester evaluation.

A majority of 69% spend less than 30 hours on their studies each week, 24% (7) declare spending only between 10 and 20 hours per week. Considering that students are supposed to spend 37.5 hours per week on studying, these figures must be the cause of some concern.

Respondents generally feel well-informed about goals and purposes of the programme modules, as well as practical information about the programme, and find that the academic outcome of attending the programme has been ‘average’ (56%) or ‘large’ (32%). The ‘very large’ category is left unchecked, while 12% (3) find the academic outcome to have been ‘little’.

The responding students are generally happy with the project formation process and project work, and find that there is a good connection between the various modules of the programme, as well as progression from one semester/module to the next.

26% (6) declare themselves to be unsatisfied with the physical environment; comments suggest a lack of power plugs and hot/humid and crowded classrooms.

Respondents are generally very satisfied with, and acknowledge the benefits of, problem-based learning.
